Ders Tanıtım Formu ve Konular

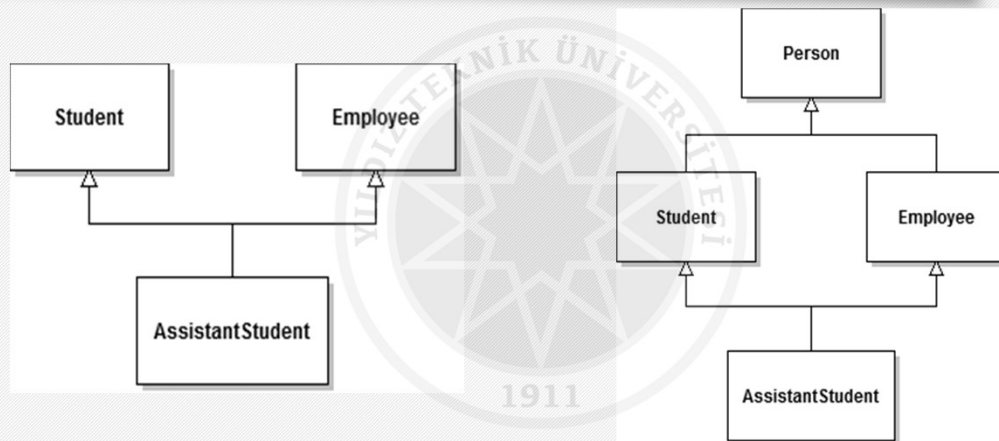

BLM2012
Nesneye
Yönelik
Programlama
Hafta 6

Hafta	Tarih	Konular
1	01.03.2022	Dersin ve Java Dilinin Genel Tanıtımı, Sınıflar, Nesneler, Üyeler, Final ve Static Kavramları
2	08.03.2022	UML Sınıf Şemaları, Kurucular ve Sonlandırıcılar, Denetim Akışı, Nesneleri Oluşturulması
3	15.03.2022	Kurucuların ve Metotların Çoklu Tanımlanması, İlkeller, String ve Math Sınıfları
4	22.03.2022	Sahiplik ve Kullanma İlişkileri, Tek Yönlü ve İki Yönlü Sahiplik Kavramları
5	29.03.2022	Kalıtım, Metotların Yeniden Tanımlanması ve Çoklu Metot Tanımlamadan Farkı
6	05.04.2022	NYP'da Özel Konular: Abstract Classes, Interfaces, Enum Sınıfları
7	12.04.2022	Exception Handling, Unit Test
8	19.04.2022	1. Ara Sınav
9	26.04.2022	Temel Veri Yapılarının Jenerik Sınıflar Eşliğinde Kullanımı (Liste ve Eşleme Yapıları).
10	03.05.2022	Ramazan Bayramı
11	10.05.2022	Dosyalar ve Akışlar ile Çalışmak (Serileştirme ve Ters İşlemi)
12	17.05.2022	Tip dönüşümü, Enum Sınıfları, İç Sınıflar
13	24.05.2022	2. Ara Sınav
14	31.05.2022	Paralel Programlamaya Giriş

Abstract Classes

BLM2012
Nesneye
Yönelik
Programlama
Hafta 6

- An abstract class is such a class that it is used as a base class and it represents a template for its regular sub classes.
 - If a class is abstract, we identify it with the keyword abstract.
- It is forbidden to create instances of an abstract class.
- Abstract classes can have member fields, just like the concrete classes.
- Abstract classes can have both concrete and abstract member methods.
 - An abstract method has only definition together with the keyword abstract, it does not have a body.

Öğr. Grv. Furkan ÇAKMAK

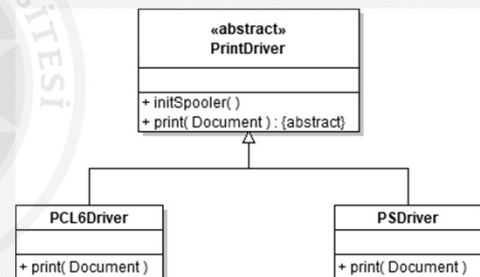

Abstract Classes (Con't)

BLM2012
Nesneye
Yönelik
Programlama
Hafta 6

- When do we need abstract classes?
- You can mark the abstract classes in UML class schemas in italics or by adding the <<Abstract>> stereotype.

- <<...>>: This is called a stereotype.

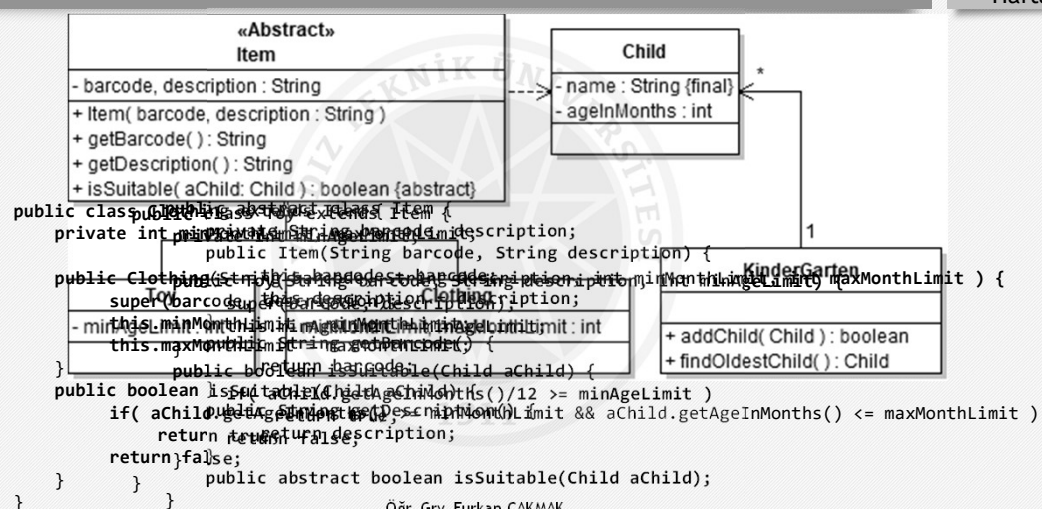

```
public abstract class PrintDriver {
    public void initSpooler( ) {
        /* necessary codes*/
    }
    public abstract void print( Document doc );
}
public class PCL6Driver extends PrintDriver {
    public void print(Document doc) {
        //necessary code is inserted here
    }
}
```

Öğr. Grv. Furkan ÇAKMAK

Abstract Classes: Example

BLM2012

Interfaces

BLM2012
Nesneye
Yönelik
Programlama
Hafta 6

- Interfaces can be thought as abstract classes **without members**.
 - If you wish, you may add "public final static" member fields only.
- An interface is a named collection of methods.
- UML representation and source code of an example:

Öğr. Grv. Furkan ÇAKMAK

```

public interface Customer {
    public void buy( Good aGood, int quantity );
}
public interface Supplier {
    public void sell( Good aGood, int quantity );
}
public interface Friend {
    public void keep( Secret aSecret );
}
public class Person implements Customer,
    Supplier, Friend {
    public void buy( Good aGood, int quantity ) {
        //related code
    }
    public void sell (Good aGood, int quantity ) {
        // related code
    }
    public void keep( Secret aSecret ) {
        // related code
    }
}
  
```

Interfaces (Con't)

BLM2012
Nesneye
Yönelik
Programlama
Hafta 6

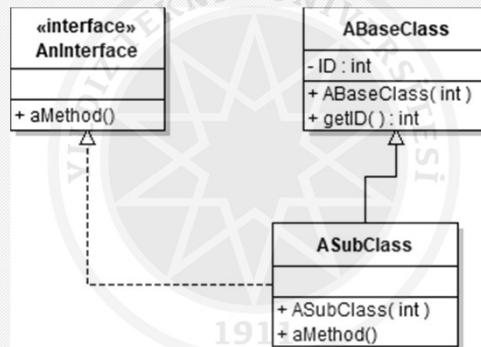

- We use interfaces ...
 - in order to group responsibilities of entities,
 - in order to give objects multiple views,
 - instead of inheritance,
 - Because inheritance is a "heavy weight" relation that should be used only when it is absolutely necessary.
 - instead of multiple inheritance.
- Rules related to interfaces:
 - A class should code the bodies of all the methods of the implemented interfaces.
 - Regular member fields cannot be defined in interfaces. Interfaces can only have "public final static" member fields.
 - Only public methods can be defined in interfaces.
 - Interfaces cannot have constructors.
 - A class can implement multiple interfaces.
 - Suggestion: Begin naming interfaces with I (capital i).

Öğr. Grv. Furkan ÇAKMAK

Interfaces (Con't)

BLM2012
Nesneye
Yönelik
Programlama
Hafta 6

- Interface implementation and inheritance can be used together when needed:

```

public class ASubClass extends ABaseClass implements AnInterface {
    // it should be easy to code the rest for you
}
  
```

Öğr. Grv. Furkan ÇAKMAK

DESIGNING AND CODING INTERFACES

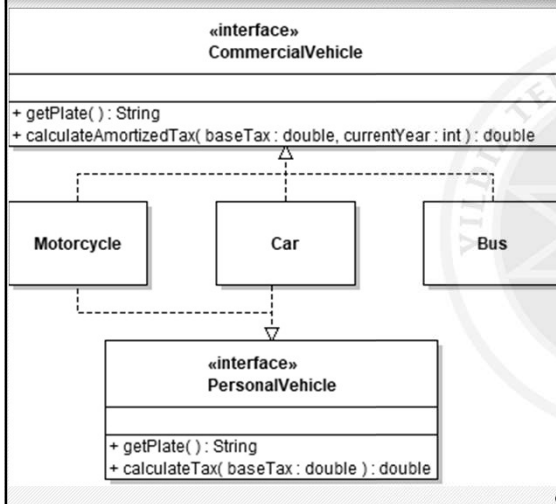

BLM2012
Nesneye
Yönelik
Programlama
Hafta 6

- Consider the following requirement about calculating the taxes of vehicles:
 - Taxation of commercial and personal vehicles is different.
 - Motorcycles, cars and buses can be registered as commercial vehicles.
 - Only motorcycles and cars can be registered as personal vehicles.
 - Only taxes of commercial vehicles can be amortized.
 - Commercial or not, calculation of the tax of different vehicles (car, bus, etc.) are very different.
- How can we model this requirement?
- Hint: If the tax calculation for different vehicles were similar (i.e. parametrized), using one abstract base class instead of interfaces would be a better choice.
- PS: We will code a year limit for maximum amortizement in the CommercialVechile interface but VioletUML doesn't let us draw this in here.

DESIGNING AND CODING INTERFACES (CON'T)

BLM2012
Nesneye
Yönelik
Programlama
Hafta 6

```

public class Bus implements CommercialVehicle, PersonalVehicle {
    private String plate;
    private double engineVolume;
    private double tonnage;
    private int modelYear;
    public Bus(String plate, int modelYear, double engineVolume, double tonnage) {
        this.plate = plate;
        this.modelYear = modelYear;
        this.engineVolume = engineVolume;
        this.tonnage = tonnage;
    }
    public double calculateAmortizedTax( double baseTax, int currentYear ) {
        return baseTax * (1 + (currentYear - modelYear) * CommercialVehicle.yearLimit);
    }
    public double calculateTax( double baseTax ) {
        return baseTax * (1 + (modelYear - 1) * CommercialVehicle.yearLimit);
    }
}

public interface PersonalVehicle {
    public String getPlate();
    public double calculateTax( double baseTax );
}

public class Car implements CommercialVehicle, PersonalVehicle {
    private String plate;
    private double engineVolume;
    private double tonnage;
    private int modelYear;
    public Car(String plate, int modelYear, double engineVolume, double tonnage) {
        this.plate = plate;
        this.modelYear = modelYear;
        this.engineVolume = engineVolume;
        this.tonnage = tonnage;
    }
    public double calculateAmortizedTax( double baseTax, int currentYear ) {
        return baseTax * (1 + (currentYear - modelYear) * CommercialVehicle.yearLimit);
    }
    public double calculateTax( double baseTax ) {
        return baseTax * (1 + (modelYear - 1) * CommercialVehicle.yearLimit);
    }
}

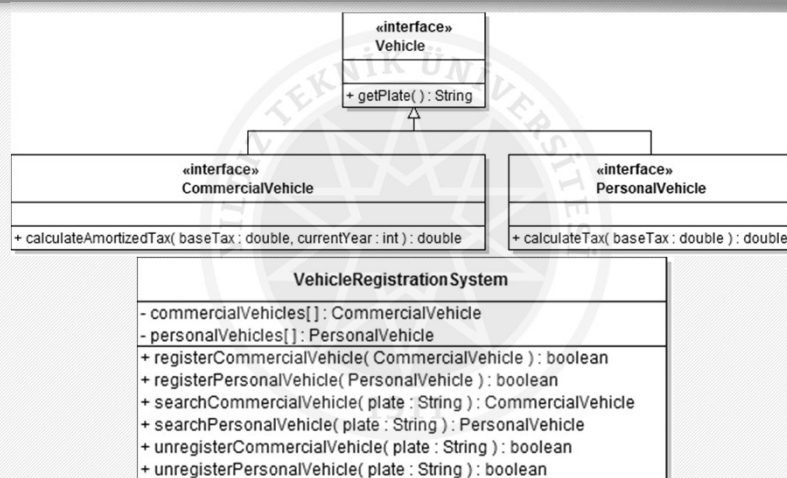

public class Motorcycle implements CommercialVehicle, PersonalVehicle {
    private String plate;
    private double engineVolume;
    private double tonnage;
    private int modelYear;
    public Motorcycle(String plate, int modelYear, double engineVolume, double tonnage) {
        this.plate = plate;
        this.modelYear = modelYear;
        this.engineVolume = engineVolume;
        this.tonnage = tonnage;
    }
    public double calculateAmortizedTax( double baseTax, int currentYear ) {
        return baseTax * (1 + (currentYear - modelYear) * CommercialVehicle.yearLimit);
    }
    public double calculateTax( double baseTax ) {
        return baseTax * (1 + (modelYear - 1) * CommercialVehicle.yearLimit);
    }
}

```

PRIMITIVE ENUMERATIONS and ENUM CLASSES

BLM2012
Nesneye
Yönelik
Programlama
Hafta 6

```
public enum Tariff {
    NETFREE(0,4,60), NET4(4,8,30), NET6(6,8,40);
    private int quota, speed, fee;
    SMALL, MEDIUM, LARGE, EXTRA_LARGE;
    private Tariff( int quota, int speed, int fee ) {
        this.quota = quota; this.speed = speed; this.fee = fee;
    }
    public int getQuota() { return quota; }
    public int getSpeed() { return speed; }
    public int getFee() { return fee; }
}

Size s = Size.MEDIUM;

public class Test {
    public static void main(String[] args) {
        Tariff tariff4 = Tariff.NET4;
        Person yunus = new Person("Yunus Emre");
        yunus.subscribeTo(tariff4);
        Person berkin = new Person("Berkin Gülay");
        berkin.subscribeTo(Tariff.NETFREE);
        System.out.println(yunus);
        System.out.println(berkin);
    }
}
```
